communicating between a subscriber and a value added services node relative to value added services offered with the objects, the objects including at least one of executable programs, functions, and data;

controlling, modifying, or executing the objects via the wireless interface of the mobile communication system;

verifying with the object the technical capabilities of the mobile station and the objects automatically adapting to the technical capabilities of the mobile station; and

subsequently selecting and loading into the mobile station an object suitable to the technical capabilities of the mobile station, wherein the technical capabilities of the mobile station are stored in a special database.

2. Method according to claim 1, wherein the objects are loaded in the mobile station via the wireless interface.

3. Method according to claim 1, further comprising the step of loading and modifying the objects in loading stations provided by a special dealer or special provider.

4. Method according to claim 1, further comprising the step of generating and displaying, with the aid of objects, fully or in part on the display of the mobile station, a menu for value added services node.

5. Method according to claim 4, further comprising the step of changing, adjusting, or updating the menu and the display of the mobile station by means of loading a new object in dependence of the actions previously executed in the value added services node.

6. Method according to claim 1, wherein the objects are stored in an object center of the mobile communication system from where they are called up and loaded in the mobile terminal.

7. Method according to claim 1, wherein the objects are loaded into a memory of the subscriber identity module.

9. Method according to claim 1, wherein transfer, activation, modification and updating the objects take place via short messages or GPRS services of the mobile communication system.

10. Method according to claim 1, wherein keys or key combinations in the mobile station are allocated via the objects to individual functions of the value added services.
